SELECTED PAPER ABSTRACTS **“Dominant Trade Invoicing and GVC Participation: A Two-Way Interaction”**

This essay examines the bidirectional relationship between dollar-invoiced trade and bilateral GVC flow using a Two-Stage Least Squares (2SLS) instrumental variables approach. The results show a robust negative bidirectional relationship: greater reliance on the dollar in trade constrains deeper GVC integration, while increased participation in GVCs, in turn, reduces dollar dependence. These patterns are sensitive to exchange rate volatility, underscoring the complexity of policy trade-offs under uncertainty.

“The Impact of Trade Invoicing Decisions on Global Value Chain Participation: An Empirical Analysis”

This paper investigates how exchange rate fluctuations influence global value chain (GVC) participation at a disaggregated level, focusing on the role of dominant currency invoicing. Using data from 96 countries (1990-2020), the analysis shows that GVC participation is sensitive to trade invoicing and currency movements. Dollar appreciation dampens GVC participation, particularly backward GVCs, which in turn affects forward linkages over time.
